PS1YN-A
POWER SUPPLY

1. GENERAL. This procurement requires a constant-voltage, constant-current dc power supply.

2. CLASSIFICATION. Type II, Class 5, Style E, and Color R in accordance with MIL-T-28800. Ventilation openings in the top surface are allowed.

3. OPERATIONAL REQUIREMENTS. The equipment shall be capable of operation within the minimum accuracies, limits, and specifications set forth below.

3.1 Output voltage and current. Continuously adjustable from 0 to 80 Vdc, 0 to 12A.

3.1.1 Load regulation. For no-load to full-load excursions: 75 mV voltage regulation, 32 mA current regulation.

3.1.2 Line regulation. For line-voltage variations of $\pm 10\%$: 75 mV voltage regulation, 30 mA current regulation.

3.1.3 Ripple and noise. 176 mVrms or 500 mV peak-to-peak maximum.

3.1.4 Temperature coefficient. For any one degree C change in the ambient temperature: 22.5 mV voltage regulation, 3.6 mA current regulation.

3.1.5 Drift. For eight hours with constant line, load, and ambient temperature: 0.1% voltage regulation, 0.15% current regulation.

3.2 Indicators. Output voltage and current. Accuracy: $\pm 2\%$ FS.

3.3 Connectors. Three-way front-panel binding posts for positive output, negative output, and chassis ground connections.

4. GENERAL REQUIREMENTS.

4.1 Power source. MIL-T-28800 nominal power source requirements are invoked. Maximum power consumption: 2 kW.

4.2 Weight. 20 kg (44 lb) maximum.

4.3 Lithium batteries. Per MIL-T-28800, lithium batteries are prohibited without prior authorization. A request for approval for the use of lithium batteries, including those encapsulated in integrated circuits, shall be submitted to the procuring activity at the time of submission of proposals. Approval shall apply only to the specific model proposed.
